

Slurry

GRIPFAST Slurry is a solvent free, three part, anti slip wearing course and waterproofing membrane, designed for use on steel, concrete and aluminium substrates. It is generally specified in applications when weight is a consideration as it proves a durable yet lightweight anti slip solution for either pedestrian or heavy vehicular traffic.

GRIPFAST Slurry is a proven product having been applied to bridges, cycleways, flyovers and RORO ramps for the last 40 years. In addition to being specified as an anti slip surface, it can also be applied as a waterproofing membrane under layers of asphalt. GRIPFAST Slurry has a typical design life of 20 years.

Product Benefits

- A proven, highly durable system, with low maintenance costs
- Resistant to fuel, oils and de-icing products
- Excellent anti slip properties combined with significant weight savings compared to conventional timber and asphalt solutions.

Pack Sizes

- 25kg, 50kg, 100kg, Bulk Unit

Aggregate grades:

- Light Pedestrian (1.4mm 2.0mm)
- Pedestrian (1.0mm 3.0mm)
- Vehicular (3.0mm 5.0mm)

Colours

- Black Slurry and Grey Aggregate
- Coloured aggregate on request

Finishes

- Plain, Grooved
